MOCK FINAL EXAM CSci 127: Introduction to Computer Science Hunter College, City University of New York

May 16, 2023

Exam Rules

- Show all your work. Your grade will be based on the work shown.
- The exam is closed book and closed notes with the exception of an 8 1/2" x 11" piece of paper filled with notes, programs, etc.
- When taking the exam, you may have with you pens and pencils, and your note sheet.
- You may not use a computer, calculator, tablet, phone, earbuds, or other electronic device.
- Do not open this exam until instructed to do so.

Hunter College regards acts of academic dishonesty (e.g., plagiarism, cheating on examinations, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures.

1. (a) Fill in the code below to produce the Output on the right:

seasons = "Spring,Summer,Autumn,Winter"

i. autumn_winter =
 for s in autumn_winter:
 print(

 print(

(b) Consider the following shell commands:

\$ pwd
/usr/student
\$ ls
hello.csv grades.csv test.py hello.py

- i. What is the output for:
 - \$ mkdir data
 - \$ mv *csv data
 - \$ cd data
 - \$ ls

Output:

Output: autumn

winter

ii. What is the output for:

\$ cd ../
\$ ls -l | grep hello | wc -l

•	Jutput:		
Г			
			I

iii. What is the output for:

\$ ls | grep test

O	utr	out	:				

2. (a) Select the color corresponding to the rgb values below:

i. rgb = (65, 65, 65)

 \square black

1	- 1
red	

 \square white

$$\square$$
 gray

 \square blue

ii. rgb = "#0000AB"

 \square black

	المصطا
- 1	rea

 \square white

$$\square$$
 gray

 \square blue

iii. rgb = (255, 255, 255)

 \square black

rod
1 50

 \square white

П	grax

 \Box blue

iv. What is the binary number equivalent of decimal number 54?

Decimal 54 = Binary

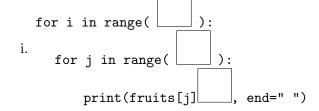

v. What is the Decimal number equivalent to Hexadecimal 2F?

Hexadecmal 2F = Decimal

	.T	 -	-		
г				$\overline{}$	
			- 1		
			- 1		
			- 1		
1			- 1		
			- 1		
			- 1		

(b) Given the list fruits below, fill in the code to produce the Output on the right:

fruits = ["orange", "banana", "apple", "cherry", "strawberry"]

Output:

_		· T			
0	b	a	С	s	
0	h	а	C.	S	

Output:

import numpy as np
import matplotlib.pyplot as plt
iii. img = np.ones((10,10,3))
img[_____, ____, ___] = 0
plt.imshow(img)
plt.show()

3. (a) What is the value (True/False):

in1 = False

i. in2 = True

out = not in1 and in2

in1 = True

.. in2 = True

in3 = False

out = not (in1 and not in2) or in3

in1 = True

... in2 = False

in3 = not in1 or not in2

out = not in1 and in3

 \square True

 \square True

 \square True

 \square False

 \square False

 \square False

iv.

in1 = False

in2 = False

in3 = False

 \square True

 \square False

(b) Draw a circuit that implements the logical expression:

in1 or not in2 and (in1 and in2 or not in3)

EMPLID:

4. Consider the following functions:

- (a) What are the formal parameters for frog()?
- (b) What are the actual parameters for hello()?
- (c) How many calls are made to frog() after calling main()?

i. Output	t

EMPLID: CSci 127 Mock, S23

and loads i	algorithm that asks the user for the name of a text file containing a grid of number it into a 2D array of integers (think like an image without the color channel), the e index (row, col) of the LARGEST number in the array.
Libraries:	
Input:	
Output:	
Design Pa ☐ Search	
☐ Single ☐ Indexing	

6. Consider the medalcount.csv dataset that reports the medal count for skating at the 2014 Winter Olympics. A snapshot is given in the image below:

Country	Gold	Silver	Bronze
Canada	0	3	0
Italy	0	0	1
Germany	0	0	1
Japan	1	0	0
Kazakhstan	0	0	1
Russia	3	1	1
South Korea	0	1	0
United States	1	0	1

Fill in the Python program below:

#Import the libraries for data frames.

#Read input data into data frame:
•
df =
#Create a new column that has a total medal count for each country
worease a new column that has a total medal countries country

7. Write a **complete Python program** that prompts the user for the name of an .png (image) file and prints the fraction of pixels that are grayscale, or a shade of gray. Recall that a pixel is a shade of gray if the red, green, and blue values are all equal.

8. (a) What does the MIPS program below print:

Output:

(b) Modify the program to print out the string "abc". Shade in the box for each line that needs to be changed and rewrite the instruction next to it.

 \square ADDI \$sp, \$sp, -6

- ☐ ADDI \$s3, \$zero, 1
- ☐ ADDI \$t0, \$zero, 65
- \square ADDI \$s2, \$zero, 5
- ☐ SETUP: SB \$t0, 0(\$sp)
- □ ADDI \$sp, \$sp, 1
- ☐ SUB \$s2, \$s2, \$s3
- ☐ ADDI \$t0, \$t0, 1
- \square BEQ \$s2, \$zero, DONE
- ☐ J SETUP
- \square DONE: ADDI \$t0, \$zero, 0
- \square SB \$t0, 0(\$sp) # Add null to stack
- \square ADDI \$sp, \$sp, -5 # Set up stack to print
- \square ADDI \$v0, \$zero, 4 # 4 is for print string
- \square ADDI \$a0, \$sp, 0 # Set \$a0 to stack pointer
- $\hfill\Box$ syscall # Print to the log

EMPLID: CSci 127 Mock, S23

9. Fill in the C++ programs below to produce the Output on the right.

```
#include <iostream>
   using namespace std;
   int main()
                                                          Output:
   {
                                                          200
                                          ){
        for(
                                                          400
(a)
                                                          600
           cout << i*2 << endl;</pre>
                                                          800
        return 0;
   }
   #include <iostream>
   using namespace std;
   int main()
   {
        int count = 20;
        int num = 10;
                                                          Output:
                                                          200 100
                                            ){
        while(
                                                          150 95
(b)
            cout << count << " " << num << endl;</pre>
                                                          100 90
            count -= 50;
            num -= 5;
        }
       return 0;
   }
   #include <iostream>
                                                          Output:
   using namespace std;
                                                          Hello
   int main(){
                                                          Hello
                                                          Hello
(c)
        for(
                                          ){
                                                          Hello
                                                          Hello
             cout << "Hello" << endl;</pre>
        }
       return 0;
   }
```

EMPLID: CSci 127 Mock, S23

10. (a) Translate the following python program into a **complete C++ program**:

```
for i in range(97,113,3):
    for j in range(i,60,-4):
        print(i," ",j)
```
